JUMPING JIMNY HAWEKA SAVES THE DAY

Haweke UK Ltd, based in Toddington Gloucestershire, recently solved a recurring problem around the Suzuki Jimny. After a call from Graeme Thomson, Service Manager at Pebley Beach Suzuki, Haweke used the knowledge and experience gained from over 40 years in the market to solve a problem no-one else could.

Pebley Beach Suzuki, in Swindon Wiltshire, received the 2002 Jimny after several tyre outlets had tried to correct excessive front wheel balance after identifying the problem.

The car was fitted with Bridgestone tyres, Suzuki's OE supplier, but none of the outlets could Balance the wheels to zero through standard procedures. As a result Mr Thomson turned to Haweke, the worlds leading authority on wheel balancing technology.

The Haweke UK Technician immediately identified a variety of procedural errors that had occurred leading to the errors at the outlets. Following the Gold balancing procedure, the same used during the factory build process, the Haweke UK Technician identified the mounting of the wheel as the problem area and utilized the Haweke adapters, spacers and cones in the Haweke product range to rectify this problem. After 2 hours work the wheel was perfectly balanced and Mr Thomson had a satisfied customer.

Graeme Thomson said," This situation showed the importance of physically mounting the wheel Correctly by using the correct accessories to mount the wheel onto the balancing machine. I have Written to the manufacturers to notify them of this problem and also tell them of the speed and Accuracy of the solution provided by Haweke UK."
